## **EXAMINER'S AMENDMENT**

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Patrea Pabst on May 14, 2007.

Claim 7 has been amended as follows:

- 7. A method for targeted recombination of a nucleic acid molecule to produce a change
- in the genome of an intact human or animal comprising the steps of:
- a) providing a single-stranded oligonucleotide having a sequence that forms a triple-
- stranded nucleic acid molecule by hybridizing with a target sequence in a double-
- stranded nucleic acid molecule with a Kd of less than or equal to 2 x 10<sup>-7</sup>;
- b) providing a donor nucleic acid such that recombination of the donor nucleic acid into
- the target sequence is induced by triple helix formation between the single-stranded
- oligonucleotide and the double-stranded nucleic acid molecule; and
- c) administering the single-stranded oligonucleotide into an intact human or animal

having a sequence that forms a triple-stranded nucleic acid molecule with the target

sequence located in the genome of the intact human or animal, wherein the

oligonucleotide binds to the target sequence with a Kd of less than or equal to 2 x 10<sup>-7</sup>.

and mutates the target sequence, thereby producing a change in the genome of the

intact human or animal.
